Negative and positive factors are assigned points based on their historic returns on investment.

Positive points are calculated based on their historical profitability (\$2.80 beats \$2.20) and how well the lower end of the 95% confidence interval compares to the average ROI. Negative points are calculated based on their historical unprofitability (\$0.80 is worse than \$1.20) and how poorly the upper end of the 95% confidence interval compares to the average ROI.

The runners listed below have: a) at least one profitable factor; b) more profitable factors than unfavorable factors; and c) more positive points than negative points. Each row lists the number of net positive factors and the runner's net positive points – a measure we use to inform bet size.
