The runners listed below are entered tomorrow and exhibit one or more negative (unprofitable) factors. All else equal, we would rather book them than bet them.

negative approaches

Negative and positive factors are assigned points based on their historic returns on investment.

Positive points are calculated based on their historical profitability (\$2.80 beats \$2.20) and how well the lower end of the 95% confidence interval compares to the average ROI. Negative points are calculated based on their historical unprofitability (\$0.80 is worse than \$1.20) and how poorly the upper end of the 95% confidence interval compares to the average ROI.

The runners listed below have: a) at least one profitable factor; b) more profitable factors than unfavorable factors; and c) more positive points than negative points. Each row lists the number of net positive factors and the runner's net positive points – a measure we use to inform bet size.
